

GREEN SERVICE

Add your food scrap to Bio-2 and watch how it turns your plate scrapings to compost!! You can add food waste any time, any day. No foot pedal or need to touch the door to add food waste. No odours, no noises, no need to monitor after adding the waste. After 24 – 72 hours of automatic composting, the waste is transferred to the lower compartment by itself for further maturation.

The upper mixing chamber is equipped with a stainless steel agitator, heater and an aerator. Power consumption is as low as 50W. You can add up to 80 kg of food waste a month!!

No worms, bugs or trash odours. Use the Bio-2 any where any time. Fits into a Kitchen cabinet, garage, laundry or even outdoors (when using outdoors, use a weather proof cover to keep the power supply dry).

Bio-2 accepts following waste:

Vegetables

Dairy

Fish, Meat

Fruits

Coffee Ground

Pet litter

Balance the Chemistry (Carbon: Nitrogen - C:N) by adding saw dust to increase "brown" content and baking soda to reduce the acidity (both are included in the starter kit with instructions).

"The first signs of global warming are now clearly visible. We urgently need to limit greenhouse gas emissions" If you care.....do your share

Green Service is committed to design and manufacture waste management equipment which are affordable to everyone on this planet. We will be the change, you wish to see in the world.
